

Which kind of media do you prefer ?

	TV	News paper	Internet	Radio	Magazine	Tabloid	Book
	9	1	11	1	0	0	0

The bar graph presents the survey amount of students that chose Maia they prefer. The horizontal axis shows the kind of media, including TV and Radio. In addition, the vertical one presents the number of students. Now I will describe the main features of this graph.

First of all , the Internet has the highest amount of student which means is famous and enjoyable kind of media . Second most popular media is T.V , it is visual one for all people of different ages . On the other hand , there are some similarity between news paper and radio , they have the same percentage, in fact this all kind of media have the lowest percentage, because it is not interest for modern generation.

Over all, according to the graph internet is more useful then other media. In addition, a lot of young people don't enjoy the 'magazine', 'tabloid' and 'book', which means that they and other people dislike papers, because modern day technology is more interesting and practical. Furthermore, with this small survey I found out that just one student out of 22 prefers paper media such as news paper.
